

LivePCTM Platform

Monica Lam, PhD
Founder and Chief Scientist

moka5 LivePC™: a software delivery platform on portable storage

PC: Choice of any PC stack

x86 OS (Windows, Linux, DOS, Solaris, Mac OS X)
and its applications

No modifications required

Runs on any Windows PC, with admin privilege

Live:

Distribute image to other subscribers

Update a golden image → update all subscriptions

Down-loaded: community portal at www.moka5.com

Pre-loaded: on portable storage

Side-loaded: your personal choice of OS + app

Features

Security

- Leaves no personal data behind; takes nothing away
- LivePCs cannot crash the host computer
- Automatically recovers from even rootkit and zero day attacks

Management

- Distributes updates to every subscriber incrementally
- Reduces cost of testing and support
- Recovers from lost drives

Applications

WORK: Remote computer management

SCHOOL: Learning software for each grade

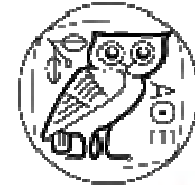

KIDS and SENIORS: Walled garden environments

GAMES: Portable gaming platform

ENTERTAINMENT: CE applications such as Tivo

SECURE BANKING: Dedicated secure stack

INTERNET CAFES: Personal environment on shared hardware

Vision: Last Step in Computer Miniaturization

PCs = generic compute platform

Every person and child can carry his (virtual) computers!
