

Are SSD Ready for the Mainstream?

Jeff Janukowicz
Research Manager – IDC
Jjanukowicz@idc.com

Perspective on the SSD market

Market Dynamics

IDC's outlook for SSDs and guidance

Putting it in Perspective

Celebrating “20 Years of Flash”

HDD technology is over 50 years old

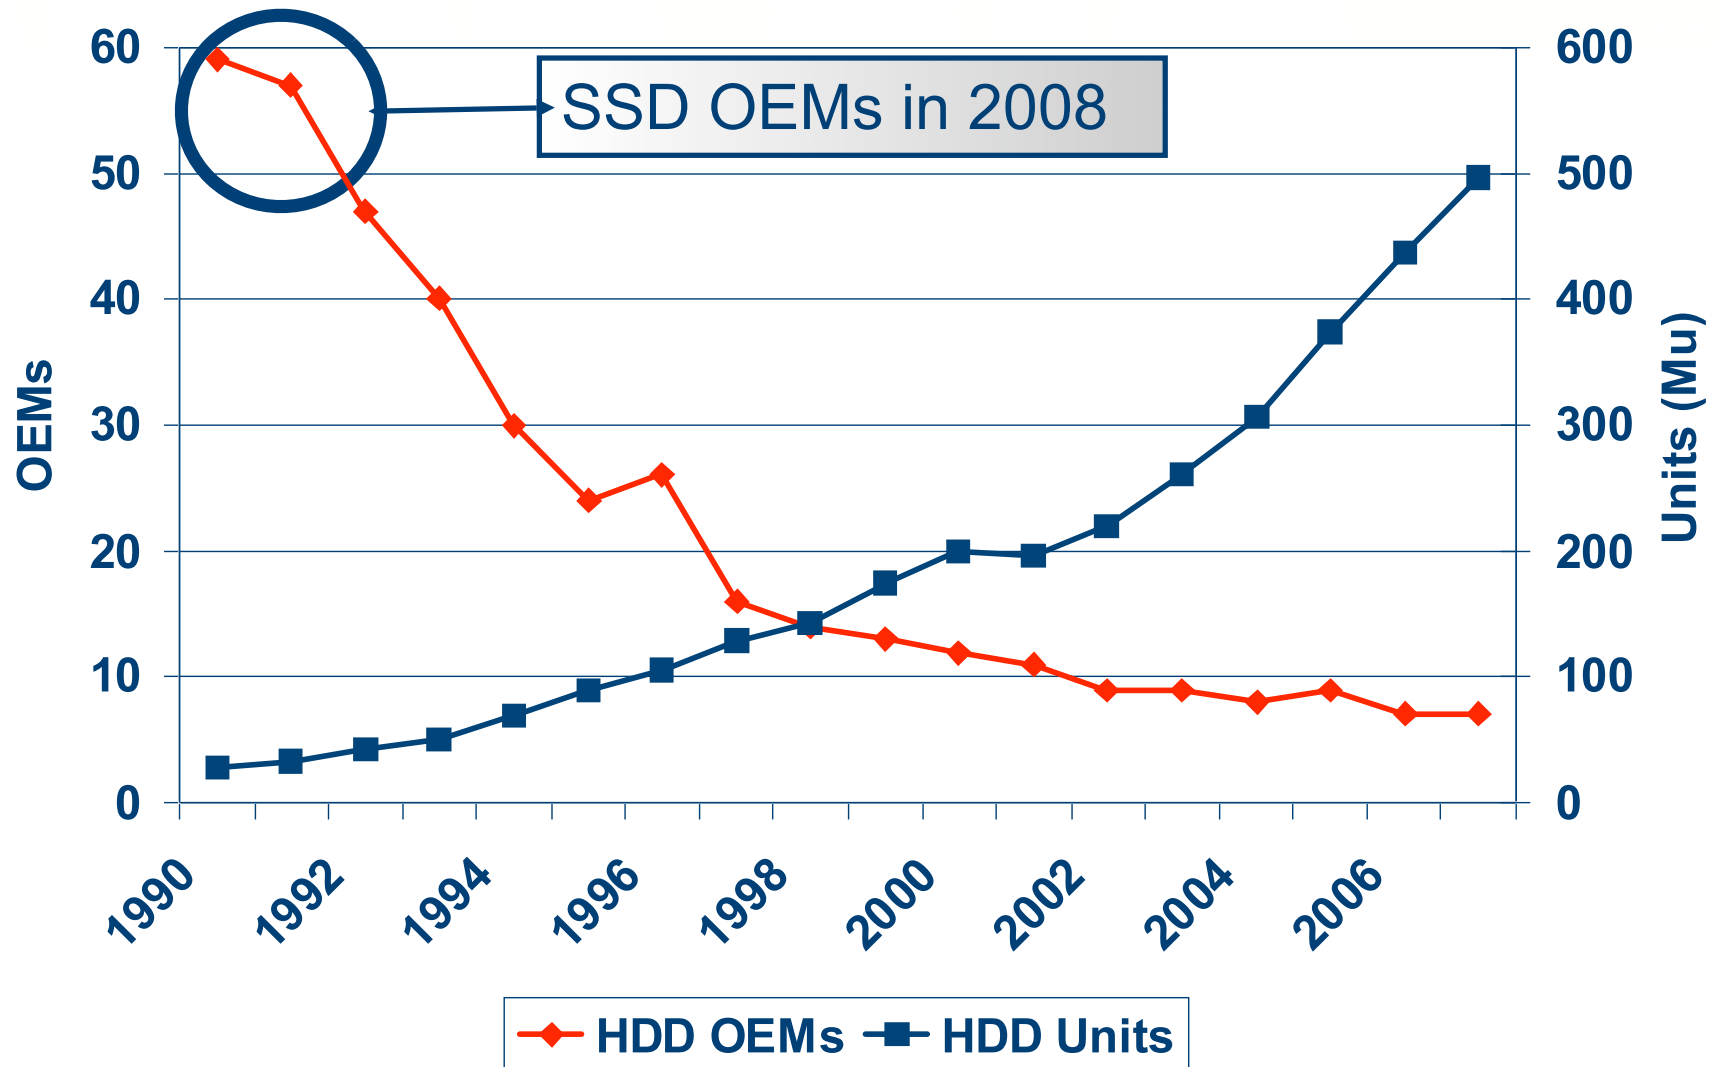

7 NAND
OEMs
supplying
a \$14B+
market

7 HDD OEMs
supplying a \$30B+
market

Numerous SSDs
OEMs supplying a
< \$400M market

More SSD Perspective

Challenges often are opportunities for those that can overcome

Why ... The “Promise” of SSDs

Increased performance

- Faster loading of applications, files, etc.
- Fast boot, shutdown, resume.

Increased reliability

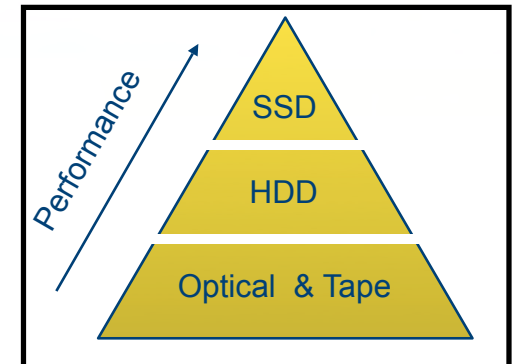

- No failures from mechanical moving parts
- Higher MTBF

Lower power consumption

- Longer battery life
- Less heat generated

Environmental factors

- Wide temperature & humidity range
- Shock / Vibration tolerance
- No acoustic noise

BUT ... The Debate over SSDs vs. HDDs is Complex

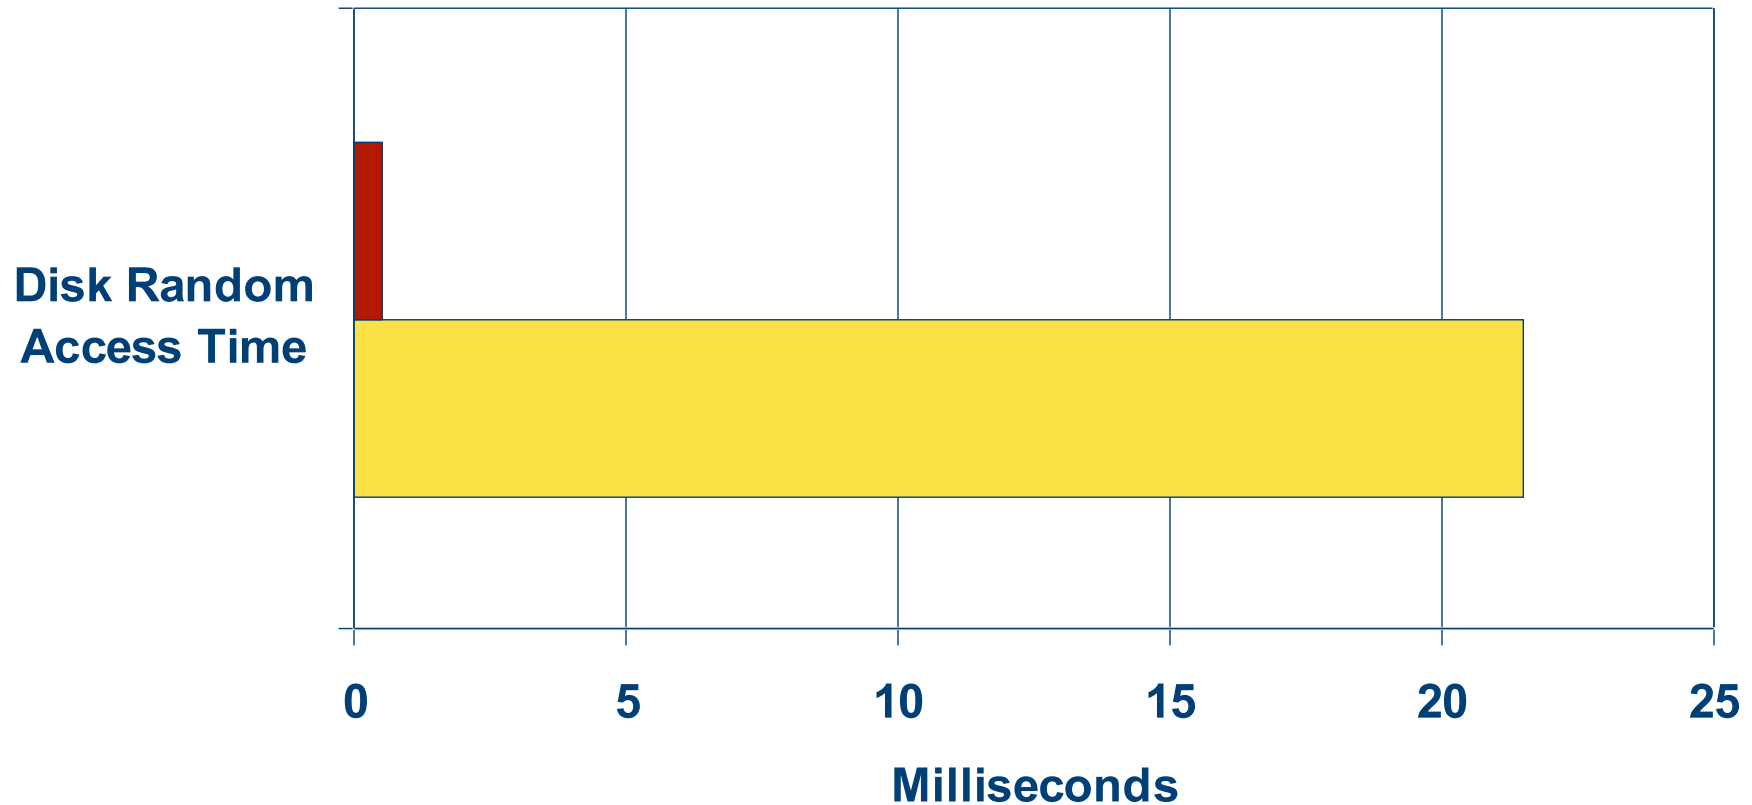

There are some challenges

- High Price Points
 - High Cost for Storage Capacity
- Real and Perceived Reliability
 - Is NAND wearout an issue?
- Write performance
 - Process to erase-write in NAND
- Field proven in PC and enterprise environment

The impact SSDs have on real-world performance is key

So ... IDC compared and contrasted PCs with different storage devices

HD Tach - Access Speeds

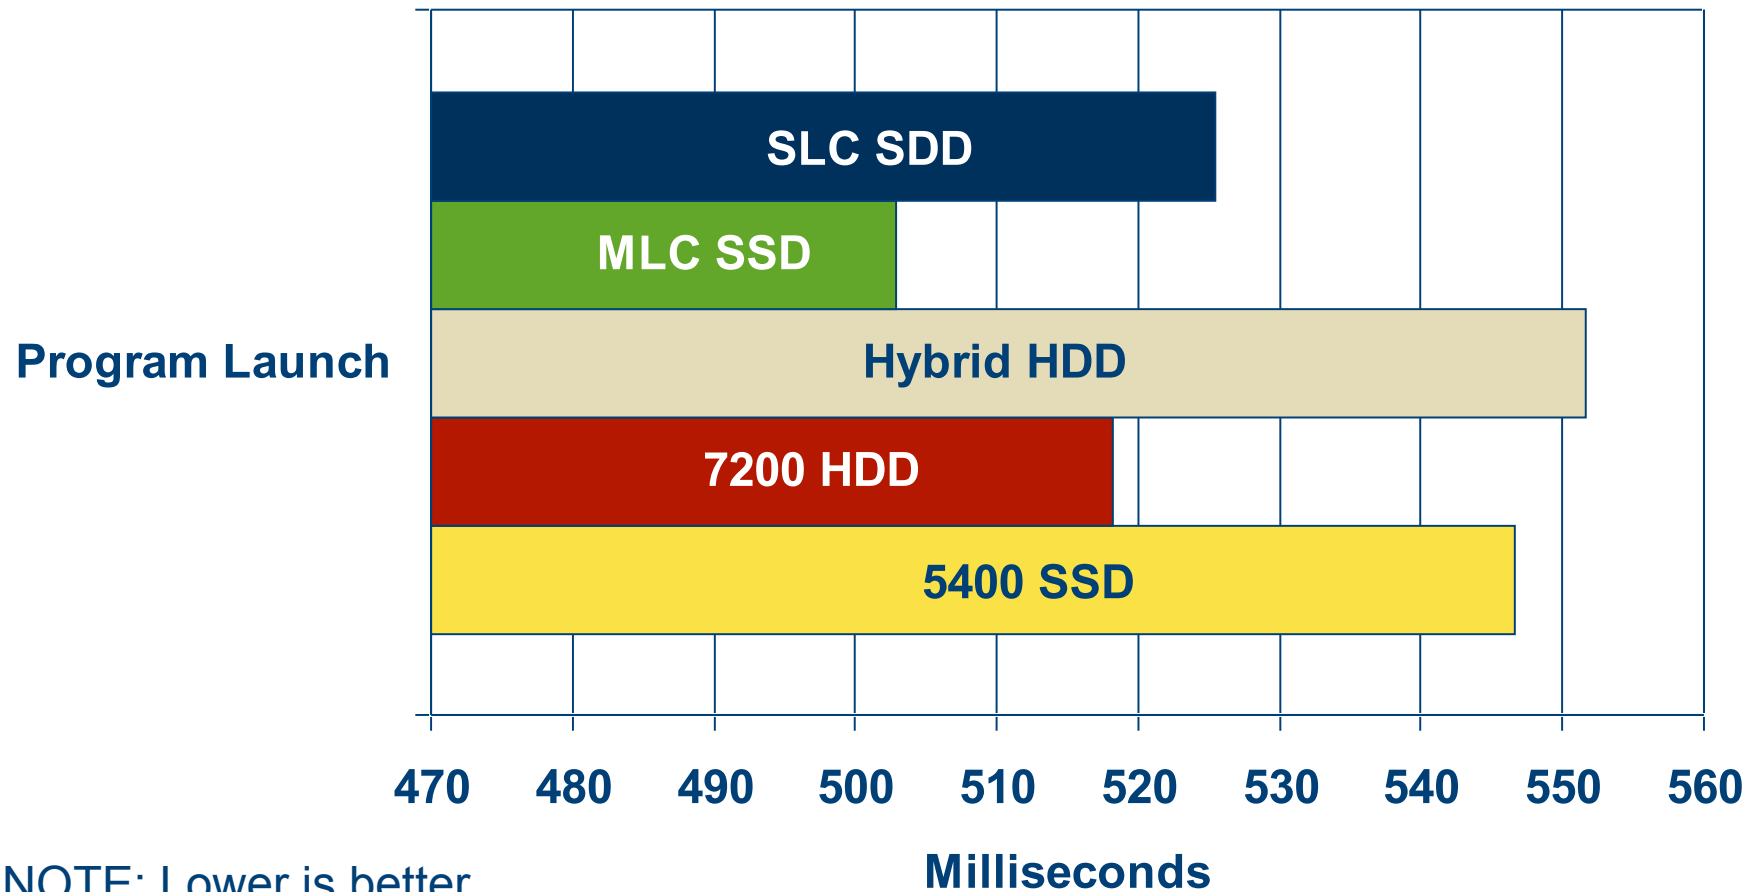

NOTE: Lower is better

 **HDD**  **SSD**

Real-world PC performance

Internet Explorer launch

NOTE: Lower is better

Source: IDC Benchmarking Study (Doc #213285), 2008

Storage is part of the system

- Today the system is optimized for HDDs
 - Hardware
 - Performance
 - Form Factor
 - Operating System
- OS, BIOS, hardware and applications will need to be fine-tuned to exploit inherent advantages
- SSD designs and controllers will need to manage the memory efficiently
- Smart system design can overcome bottlenecks

Are SSD Ready for the Mainstream?

A Year of Progress ...

Growing evidence that SSDs are making in-roads

- Notebook PC now offer SSD as an option
- Blade servers use SSDs
- Enterprise storage systems feature SSDs
- ULC PC have an SSD

The technology improving

- Large number of companies investing in SSDs
- MLC based SSD
 - Lower price point
- Read/Write speeds are improving

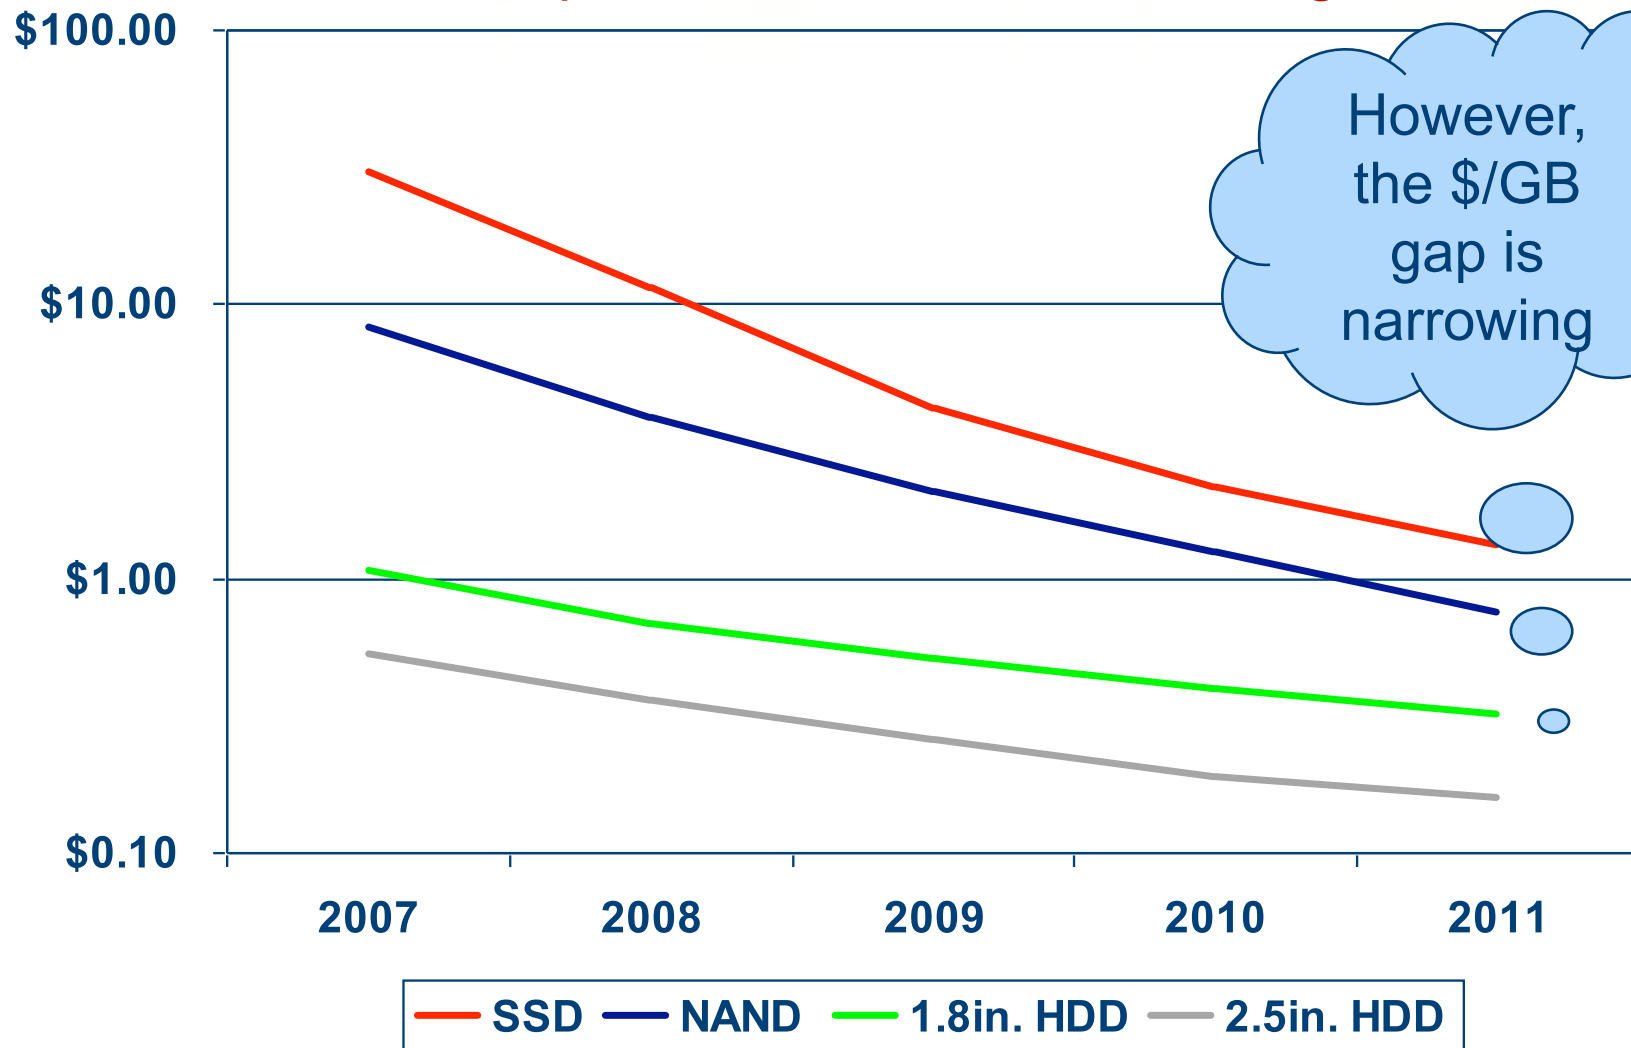

Sorting out the details

- The computing market is dynamic
- As markets evolve, system OEMs insert other requirements into the decision matrix
 - For Example: ULCPC
- Usage models vary depending on your application
 - Important for SSDs because of performance and reliability characteristics
- Competition is increasing
 - Effectively communicating with customer is key

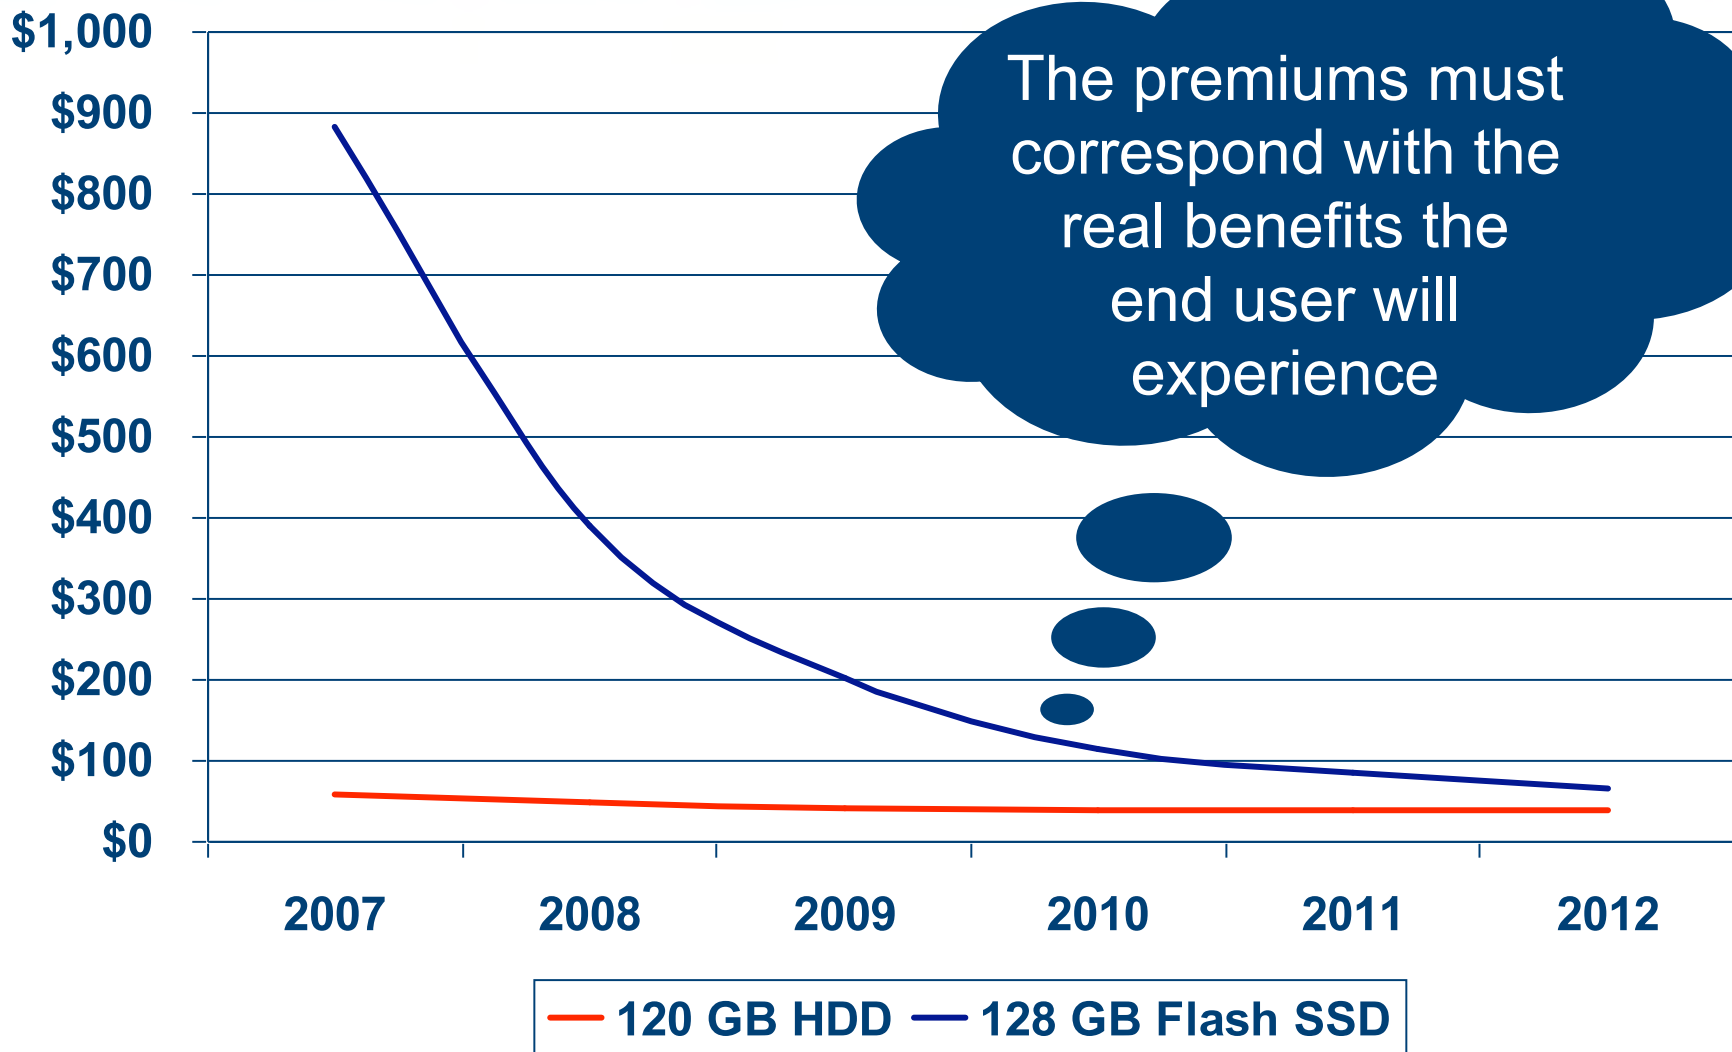

SSDs are Still a Significant Premium to HDDs!

\$/GB is important, but not the deciding factor

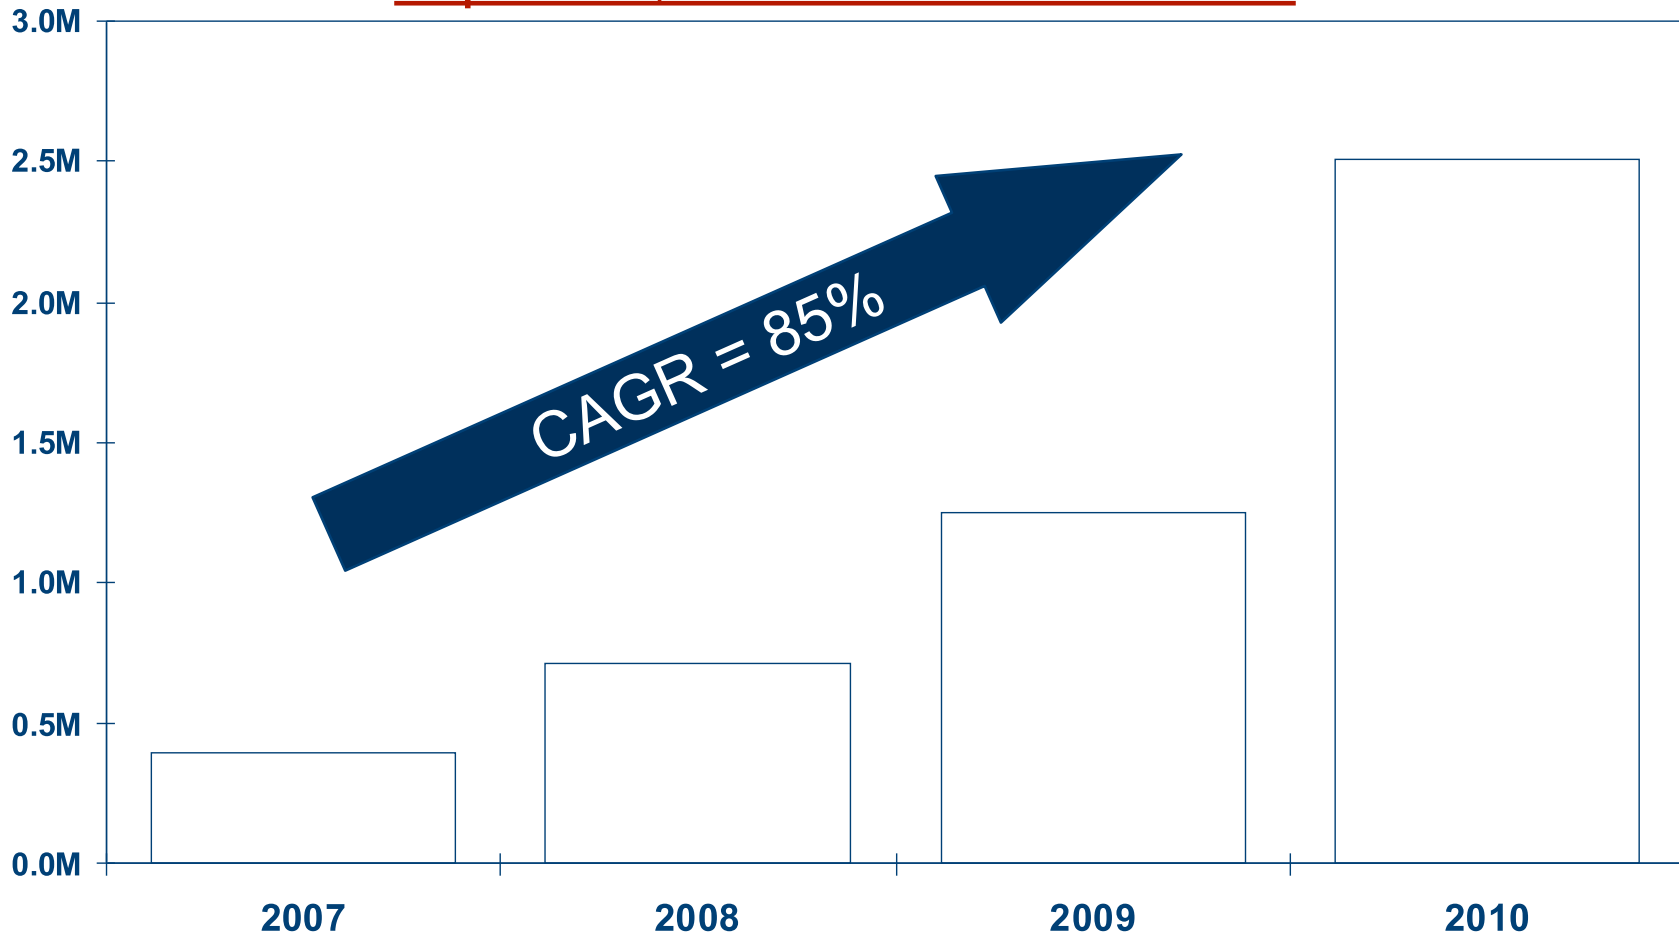

HDD and SSD Price Comparison

IDC's Worldwide SSD Forecast

Adoption will increase as price points decline, technology improves, and use-cases evolve

Source: IDC 2008

□ Revenue

- The future for SSDs continues to look bright
 - Continue to push technology, while addressing challenges
- SSD OEMs must understand the value proposition of their customers
 - Attending profitably to these markets that fit
- Competition is increasing
 - Educating the consumer is important
- SSD and systems need to be optimized around specific solutions
 - This provides an opportunity to innovate and differentiate for SSD OEMs.
