

SSD Cache for Client Computing? A Killer App for OEM & Aftermarket!

- Kevin Silver, NVELO

Why Cache?

HDD

- Low performance
- Low price, \$0.10/GB

SSD

- High performance
- High price, \$1.00/GB

The goal is pretty simple

- Get the best of **both**!
- SSD performance with HDD \$/GB

State-of-the-Art HDD...

“Ultrabook” HDD

- 500GB
- 7200 RPM
- 2.5”, 7mm
- \$0.10/GB

State-of-the-Art SSD...

“Ultrabook” SSD

- 128GB
- MLC NAND
- mSATA
- \$1.00/GB

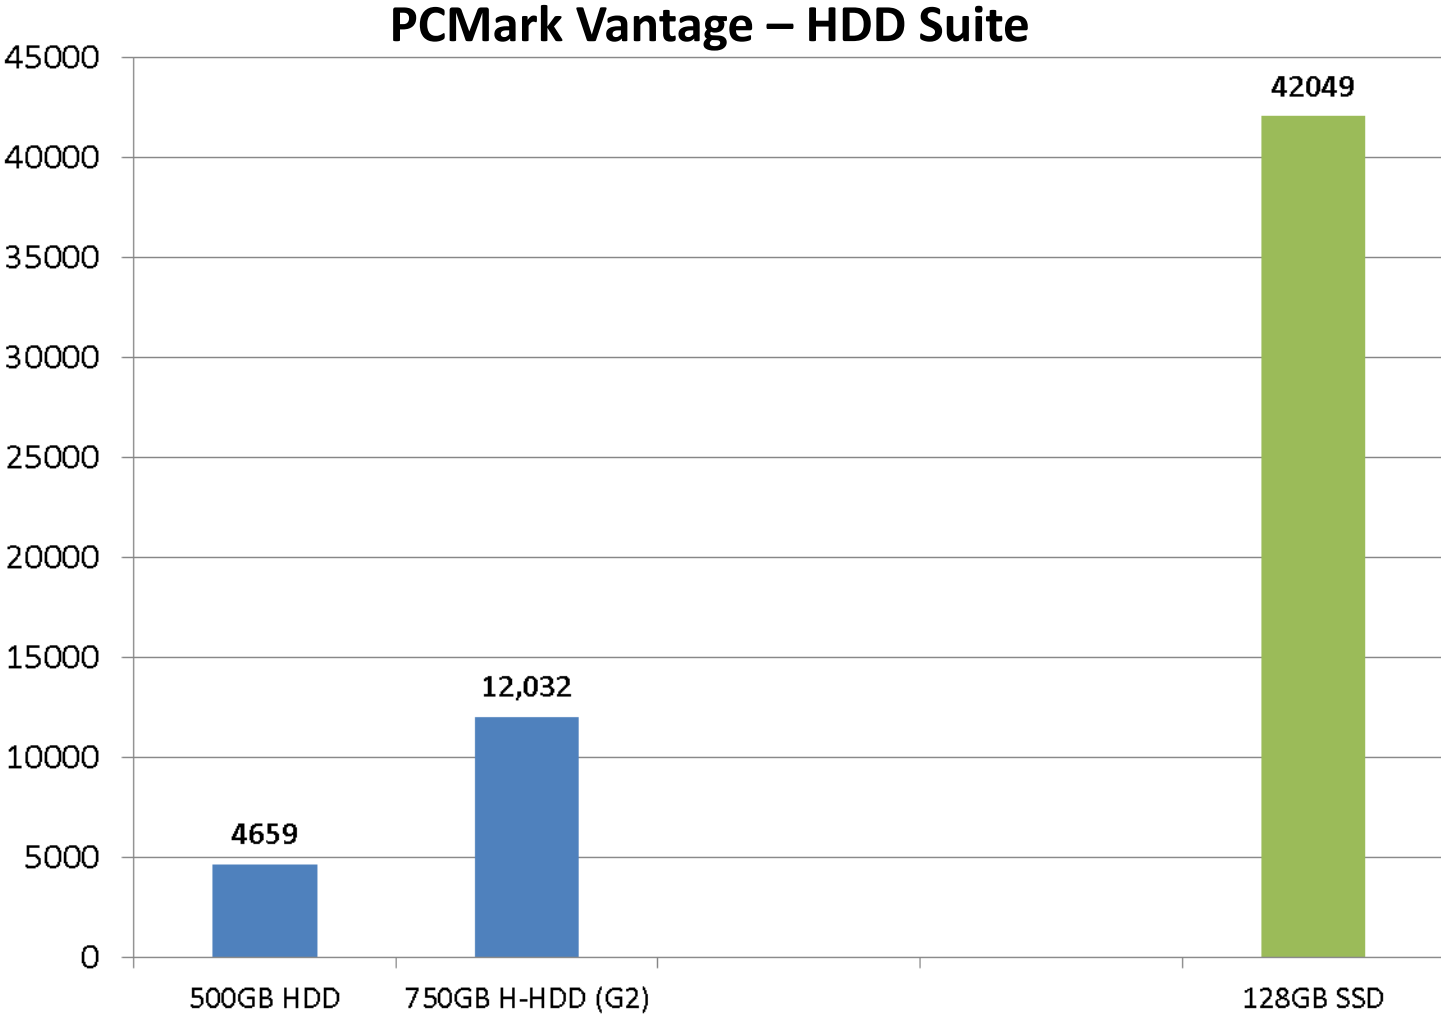

Performance Differences?

Traffic	HDD	SSD	SSD > HDD	HDD/SSD
READ Seq	91.8	477.3	4x	19.2%
READ 512K	29.9	360.6	11x	8.3%
READ 4KQ1	0.4	23.7	67x	1.5%
READ 4KQ32	0.7	305.7	430x	0.2%
WRITE Seq	98.3	188.4	1x	52.2%
WRITE 512K	23.5	195.0	7x	12.1%
WRITE 4KQ1	0.7	44.6	61x	1.6%
WRITE 4KQ32	0.7	183.5	248x	0.4%

We Can Bridge the SSD–HDD Gap

What about Price/Capacity?

Storage Configuration	HDD		SSD		Totals		
	(\$)	(GB)	(\$)	(GB)	(\$)	(GB)	\$/GB
HDD Only	\$50	500			\$50	500	\$0.10

Price/Capacity

Storage Configuration	HDD		SSD		Totals		
	(\$)	(GB)	(\$)	(GB)	(\$)	(GB)	\$/GB
HDD Only	\$50	500			\$50	500	\$0.10
Hybrid-HDD (G2)	\$135	750			\$135	750	\$0.18
SSD Cache: Write-Around	\$50	500	\$24	24	\$74	500	\$0.15
SSD Cache: Write-Back	\$50	500	\$48	48	\$98	500	\$0.20
SSD Only			\$128	128	\$128	128	\$1.00

Price/Capacity/Performance

Storage Configuration	HDD		SSD		Totals			Perf.	Value
	(\$)	(GB)	(\$)	(GB)	(\$)	(GB)	\$/GB	PCMV-H	\$/PB/Perf.
HDD Only	\$50	500			\$50	500	\$0.10	4,659	\$21.46
Hybrid-HDD (G2)	\$135	750			\$135	750	\$0.18	12,032	\$14.96
SSD Cache: Write-Around	\$50	500	\$24	24	\$74	500	\$0.15	29,146	\$5.08
SSD Cache: Write-Back	\$50	500	\$48	48	\$98	500	\$0.20	35,204	\$5.57
SSD Only			\$128	128	\$128	128	\$1.00	42,049	\$23.78

There is tremendous value in SSD caching...

Storage Configuration	HDD		SSD		Totals			Perf.	Value
	(\$)	(GB)	(\$)	(GB)	(\$)	(GB)	\$/GB	PCM-V-H	\$/PB/Perf.
HDD Only	\$50	500			\$50	500	\$0.10	4,659	\$21.46
Hybrid-HDD (G2)	\$135	750			\$135	750	\$0.18	12,032	\$14.96
SSD Cache: Write-Around	\$50	500	\$24	24	\$74	500	\$0.15	29,146	\$5.08
SSD Cache: Write-Back	\$50	500	\$48	48	\$98	500	\$0.20	35,204	\$5.57
SSD Only			\$128	128	\$128	128	\$1.00	42,049	\$23.78

...the Death of the HDD has been greatly exaggerated.

Different Approaches to Caching

■ SSD Cache

- Host Software Manages SSD cache + HDD storage

- Example:

- 24GB mSATA SSD

- 500GB HDD

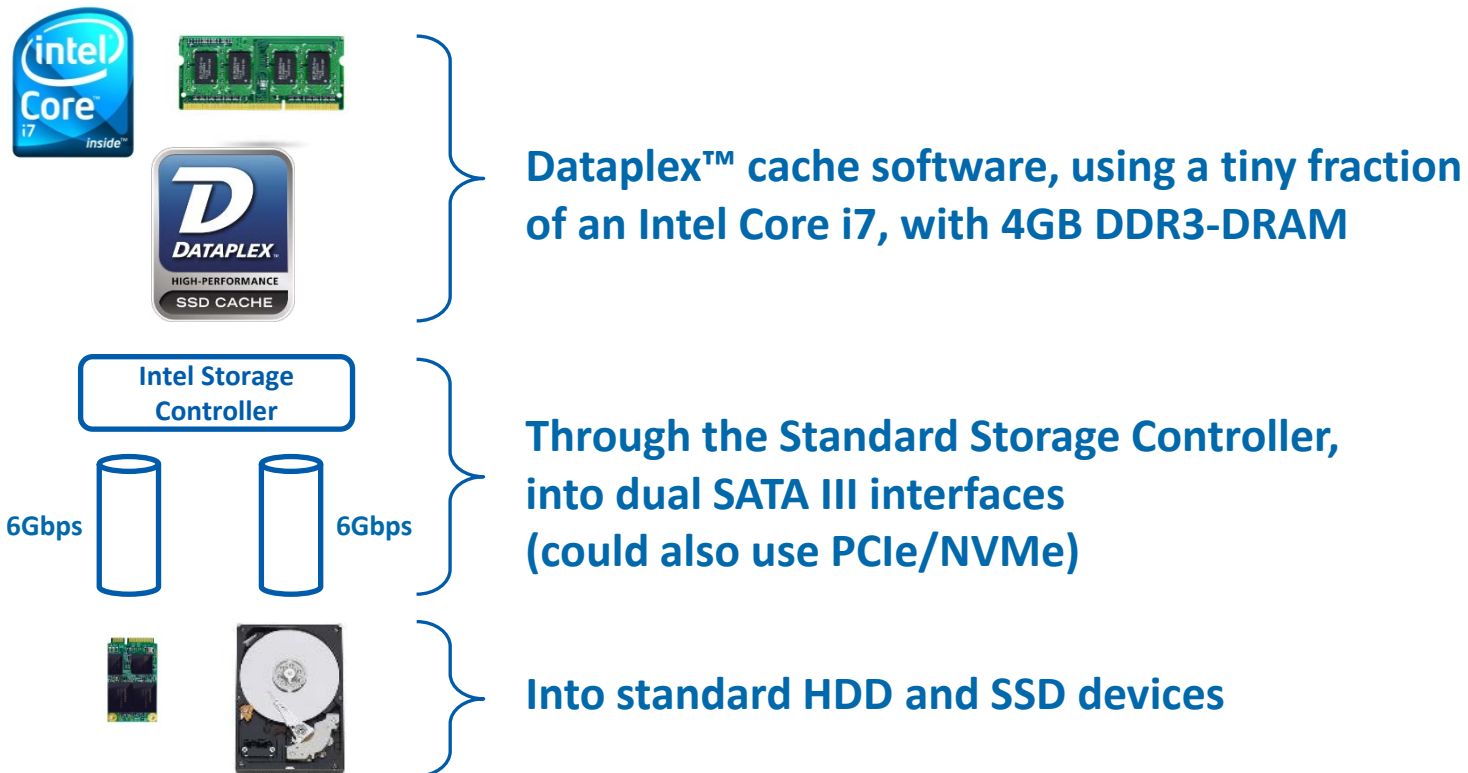

■ Hybrid

- Single “Hybrid-HDD” containing SSD + HDD
- Caching done with host software + device firmware

SSD Cache (e.g. Intel, NVELO)

Hybrid-HDD (e.g. Seagate, WD)

New software, running on an Intel Core i7, with 4GB DDR3-DRAM, to determine data “hotness”

New Storage Controller passes data “hotness” information downstream through a modified SATA protocol.

New H-HDD Firmware, running on new/additional CPU and DRAM resources, interprets data “hotness”, moves data to-from HDD and SSD, using new SSD controller HW/FW.

New Host Software:
Are you Hot or Not?

New (Intel?) Storage
Controller

6Gbps

New SATA Protocol

(All this fits inside here)

New Firmware
for Caching

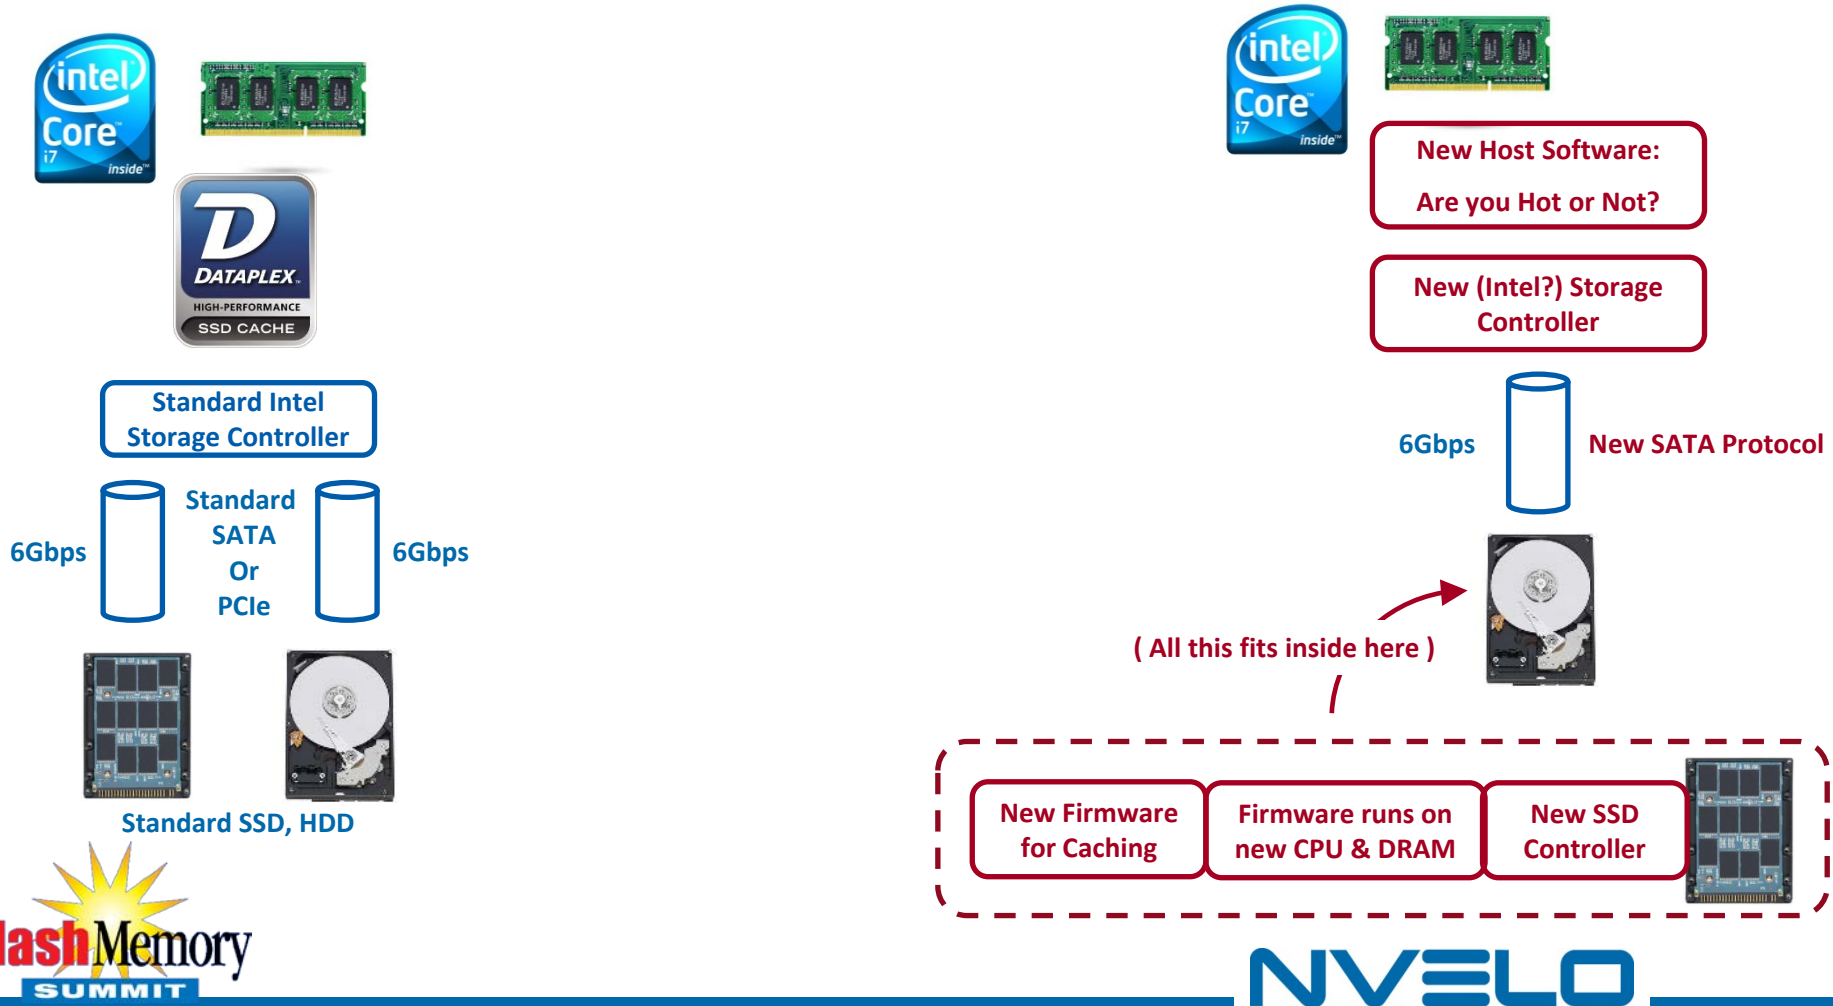

Firmware runs on
new CPU & DRAM

New SSD
Controller

Different Approaches to Caching

- SSD Cache (e.g. Intel, NVELO)
- Hybrid HDD (e.g. Seagate, WD)

HDD's are Amazing Works of Engineering

30 years of technical innovation

Why Take a Nearly “Perfect” Device...

...and Force it to do Unnatural Things?

One Size Does Not Fit All...

Many new devices & applications, means many new storage requirements...

Storage Subsystem

Technology Innovations for Cache/Storage

- Device Level:
 - Specialized SSD's, optimized for caching
- Storage Stack:
 - Utilize all levels: DRAM Memory, SSD Cache, HDD Storage
- Storage Protocol:
 - PCIe, NVMe
- Software:
 - “Cache Aware” applications

Summary

- SSD Cache is a viable/valuable storage configuration for PC's Today
 - Products are on the market today
 - Popular in Ultrabook configurations, moving to other PC categories
- Plenty of room for different cache/hybrid implementations
 - Lots of new innovations in the labs today
 - Expect 2013 to be a “break-out” year for cache/hybrid solutions
- You can upgrade your existing PC with SSD caching today
 - Cache SSD's w/Dataplex available from: Corsair, Crucial, Edge, Mushkin, OCZ
- Visit the NVELO booth here at FMS to learn more about SSD cache solutions!

Tutorial Session?

If you really want to understand SSD caching:

1. Review the following 3 cache strategies:
 - a) Write-Around
 - b) Write-Through
 - c) Write-Back

2. Understand the impacts of each strategy on:
 - a) Overall READ and Write performance
 - b) SSD Endurance
 - c) Cost (Minimum SSD capacity)
