SSHD Challenges: Short Term and Long Term

■ **Short-Term:**

- SSHD Form Factor
- Standardization
- Interchangeability

■ **Long-Term**

- Marketing
- Promotion
- SSDs (at “good enough” capacities)

SSHD Operating Modes

- ***Self Optimized Mode:***

The SSHD works independently of the PC operating system to make decisions about identifying data to be stored in NAND memory.

- ***Host Optimized Mode (or Host Pinning Mode):***

The SSHD enables an extended set of SATA commands that allow the host operating system to make decisions about identifying data to be stored in NAND memory.
