

Enterprise Storage Power/Performance Comparisons

Chuck Paridon

HPES Master Storage Performance Architect

Hewlett Packard

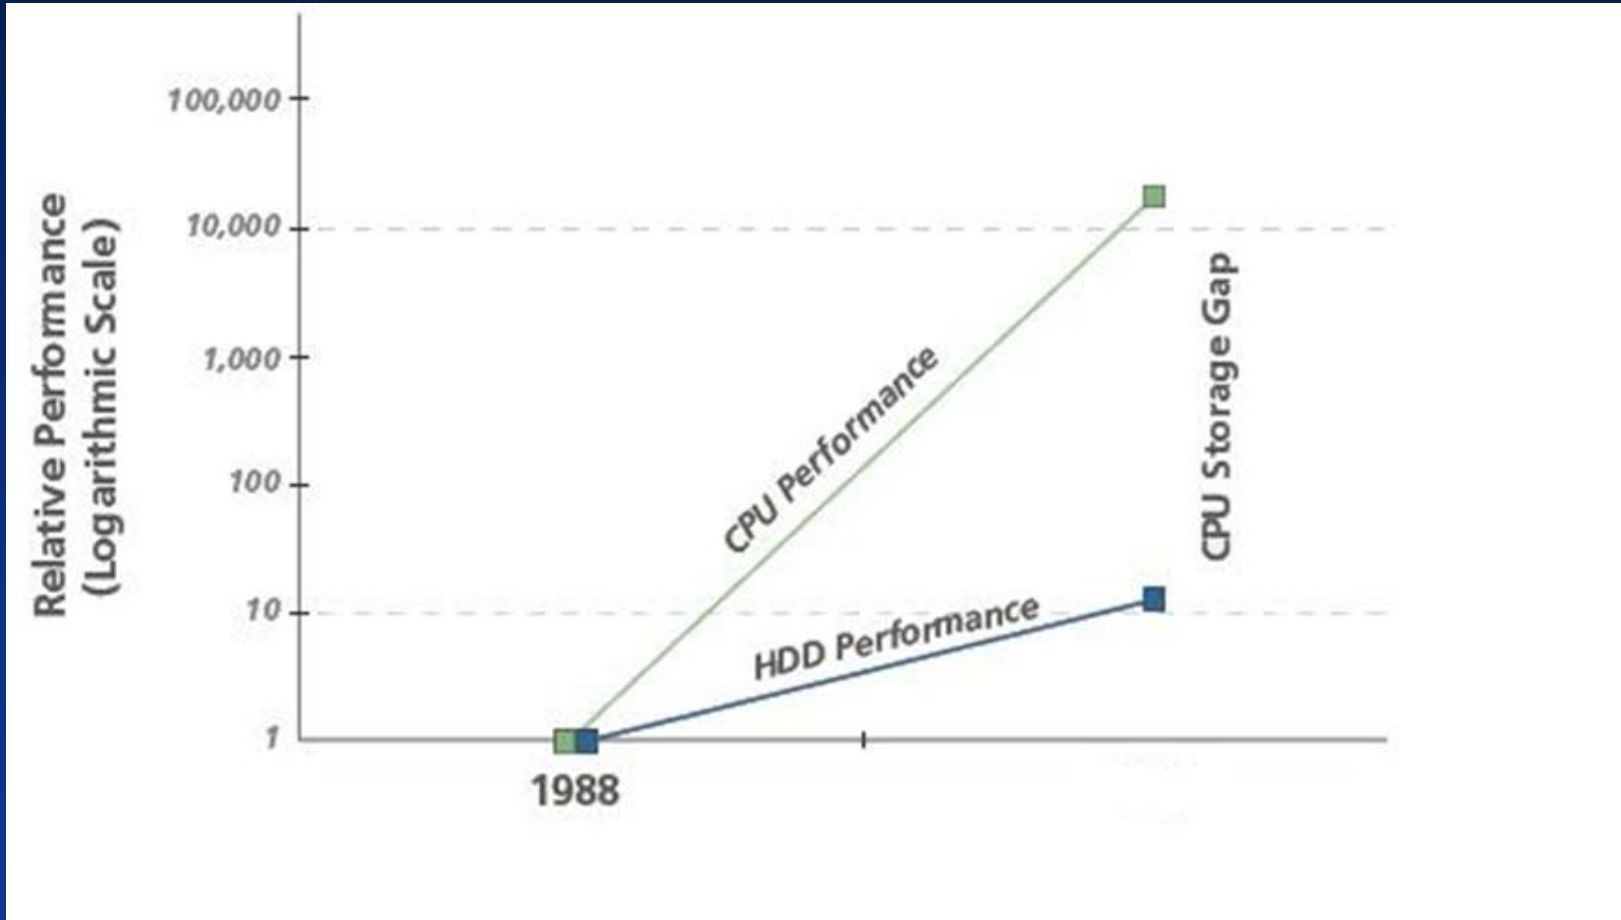

Moore's Law

Computer technology has an exponential growth rate, doubling every 18 to 24 months.

Applies to Hard Drive Capacity

CPU Performance Gap

PCIe FLASH vs HDD Performance Characteristics

❖ Flash Characteristics

➤ High IOPS

- 100k-1,000,000 IOPS /card

➤ High bandwidth

- 1.5GB/s to 6.0GB/s per card

➤ Low latency

- As low as 30 microseconds

❖ HDD Characteristics

➤ LOW IOPS

- 100-200 IOPS per device

➤ Low bandwidth

- 85 to 100 MB/s per device

➤ High latency

- 10's of milliseconds

PCIe FLASH vs HDD Power Characteristics

❖ Flash Characteristics

▶ Power Consumption

- 4 Watts/card (active)
- 3 Watts/card (idle)

▶ IOPS/Watt: ~ 166,000

❖ HDD Characteristics

▶ Power Consumption

- 5 Watts/card (active)
- 4 Watts/card (idle)

▶ IOPS/Watt: ~ 30

5,500x Increase in IOPS/Watt!

Thank you
