HYPERSCALE ≠ ENTERPRISE

- Spend time to save \$ vs. Spend \$ to save time
- Software orientated
- Huge Capacity Growth
- CapEx and OpEX → calls for efficiency
- Interactive applications support

HYPERSCALE SSD PRICING IS GETTING SIMILAR TO CLIENT

COST PER GB HIGHER THAN FOR CLIENT

- Demand for over provisioning and longer endurance NAND
- Specific FW features
- Power loss data protection
- Security

Marvell Extends Leadership in SSD Market with Groundbreaking PCIe 3.0 NVMe Express SSD Controller

The Marvell 88SS1093 delivers high-performance data center and client solid-state storage solutions with new Flash-optimized architecture and advanced NANDEdge LDPC technology.

SANTA CLARA, Calif. – (Aug 5, 2014) – [Marvell](#) (NASDAQ: MRVL) today announced the introduction of its first native Non-Volatile Memory Express (NVMe) solid-state drive (SSD) controller, the 88SS1093. The Marvell® 88SS1093 NVMe SSD controller delivers high-performance solid-state storage solutions with a fully Flash-optimized architecture overcoming the SAS-SATA performance limitations by optimizing hardware and software to take full advantage on NAND and addressing the needs of data centers and client systems that utilize next-generation PCIe 3.0 SSD storage. The 88SS1093 also integrates Marvell's third generation NANDEdge™ error-correcting, low-density parity check (LDPC) technology for higher reliability and endurance boost that was previously announced with [Marvell's fifth generation SATA SSD controller, the 88SS1074](#).
