Disk Operations vs. Latency

COPY DATA IS OUT OF CONTROL

Every copy of primary data makes multiple copies

IDC: >60% data from copies

A \$44B global expense!

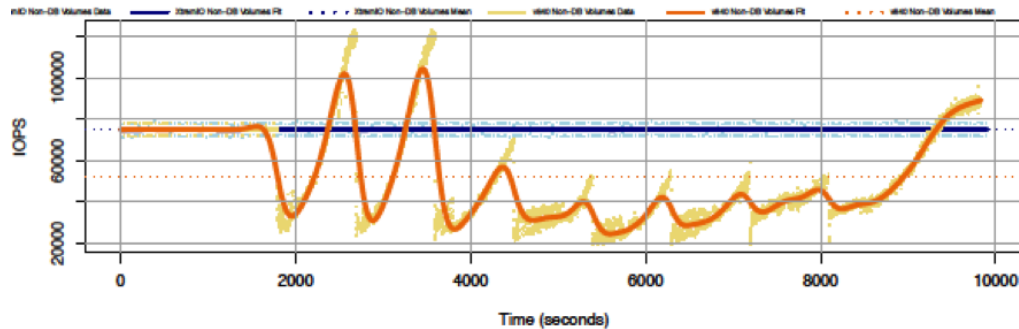

COPY DATA MANAGEMENT APPROACHES

WHY DON'T THEY WORK?

- Method 1 – “Space-Efficient” Snapshots
 - Impact production performance, non-production scale, metadata bloat impacts snapshot performance
- Method 2 – Full “Brute-force” copies
 - Too Costly, slow development cycles, slow copy/refresh, stale data
- Method 3 – Dedicated CDM platform
 - Limited Scalability , non-production scale/performance, Incremental costs

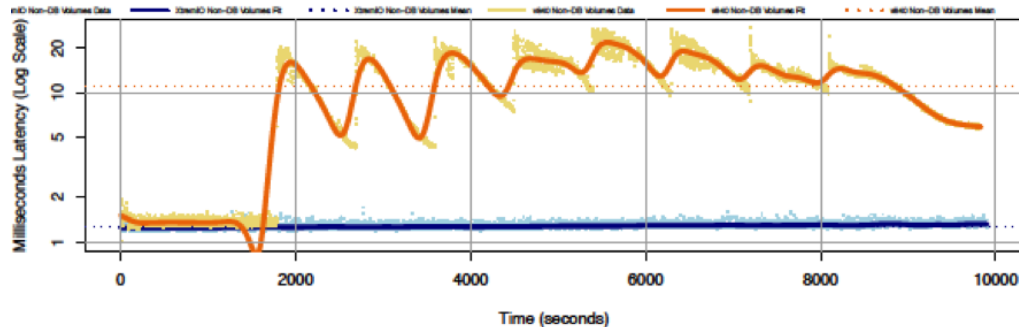

XTREMIO VS. TRADITIONAL SNAPSHOTS

XtremIO Vs. Vendor "A" steady state IOPS over Time

With XtremIO you can't even tell when the snapshots took place. It delivers the same consistent IOPs and low latency

XtremIO Vs. Vendor "A" steady state Latency over Time

Vendor A's array takes a noticeable performance hit every time the snapshot is created. This would never be a viable option for CDM use cases.

COPY DATA MANAGEMENT

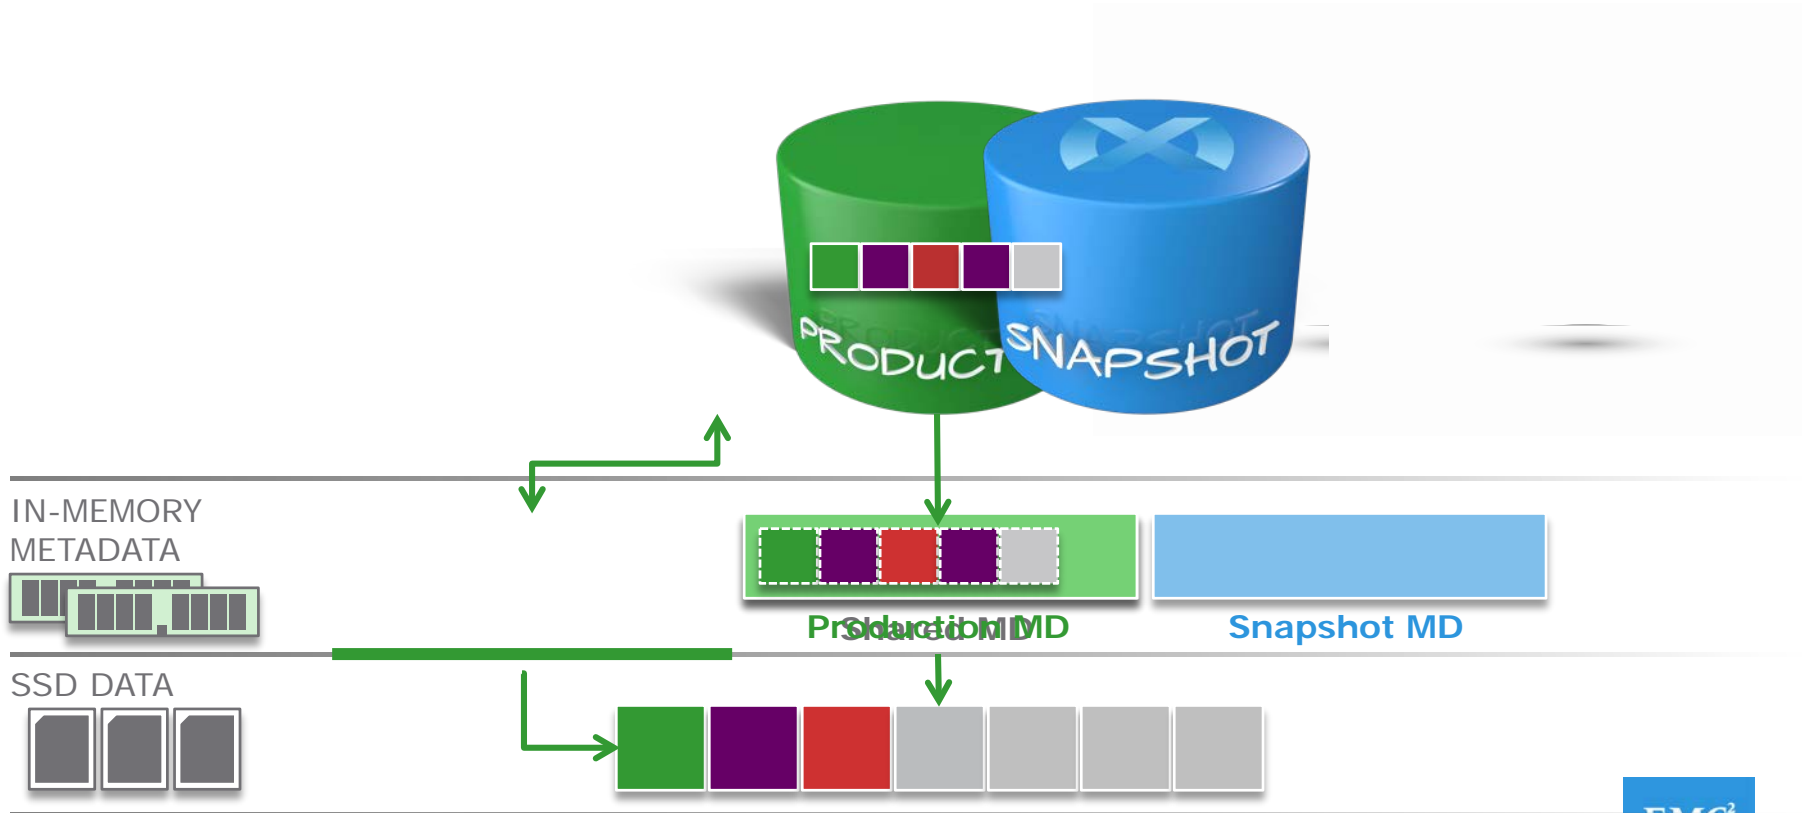

NEW OPTION W/ XTREMIO

In-Memory

Integrated Copy Data Management

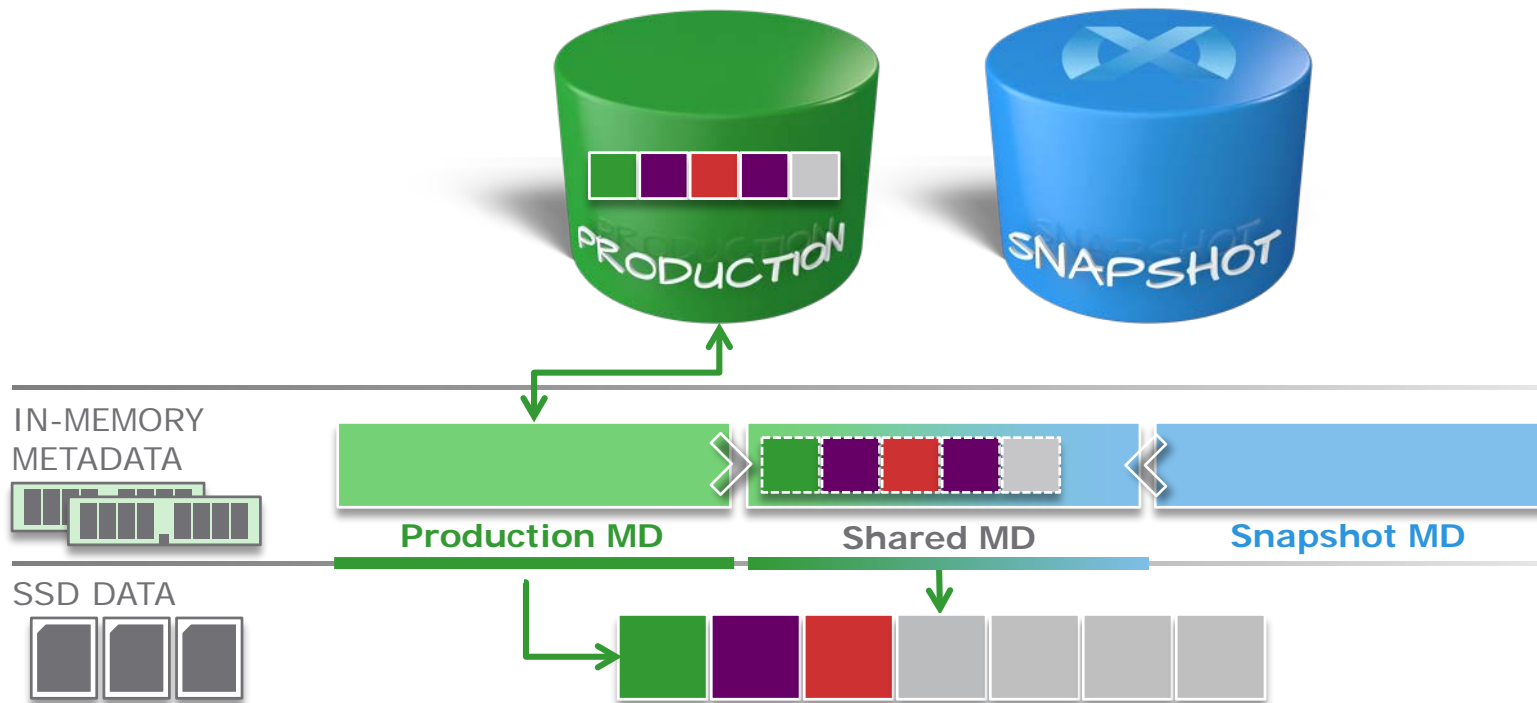

FAST & EFFICIENT CREATION INSTANTLY

IT ONLY INVOLVES ALLOCATION TO A SMALL CONTAINER

METADATA MANAGEMENT IS EFFICIENT

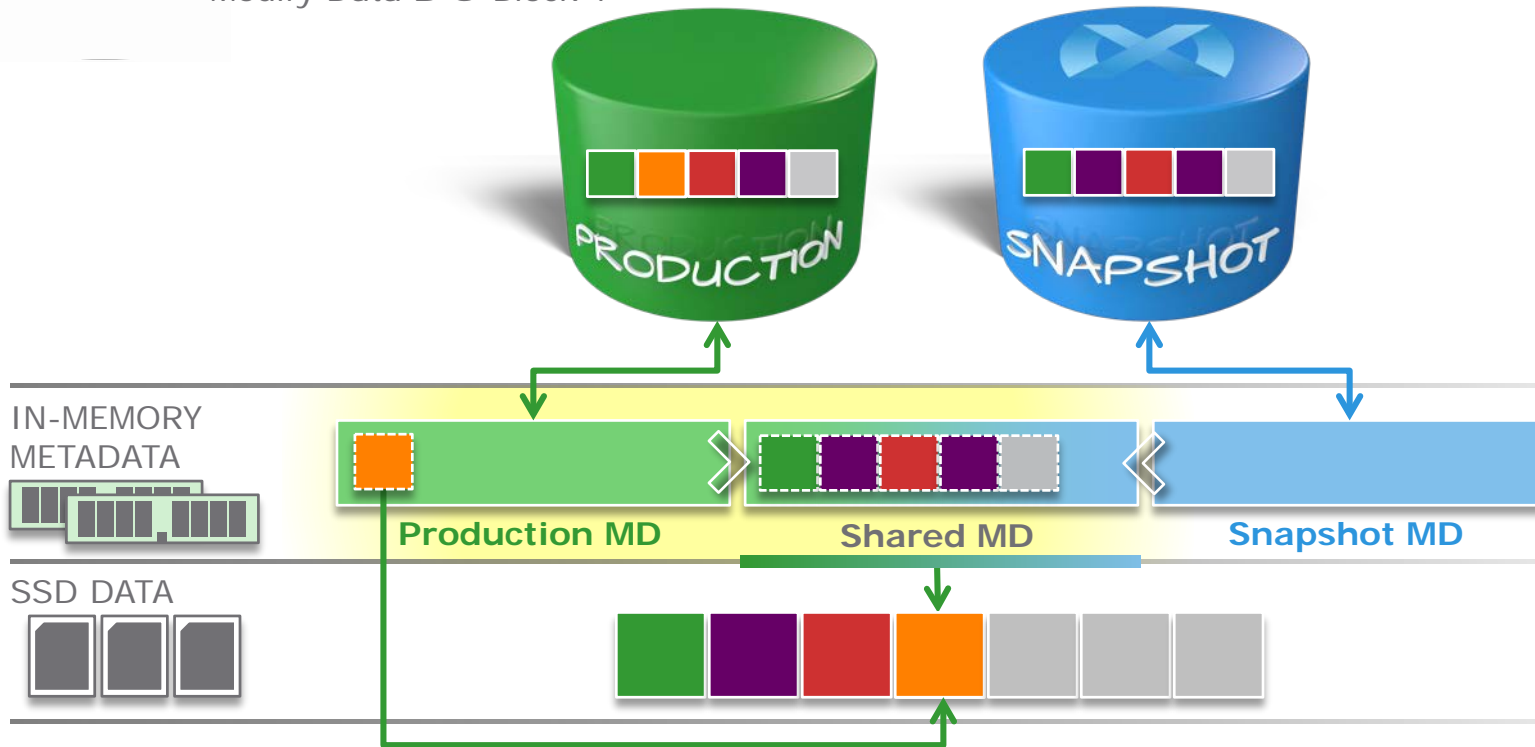

ENABLING THOUSANDS OF SPACE EFFICIENT COPIES

METADATA MANAGEMENT IS EFFICIENT

THE METADATA IS SHARED AND IN-MEMORY SPACE EFFICIENT

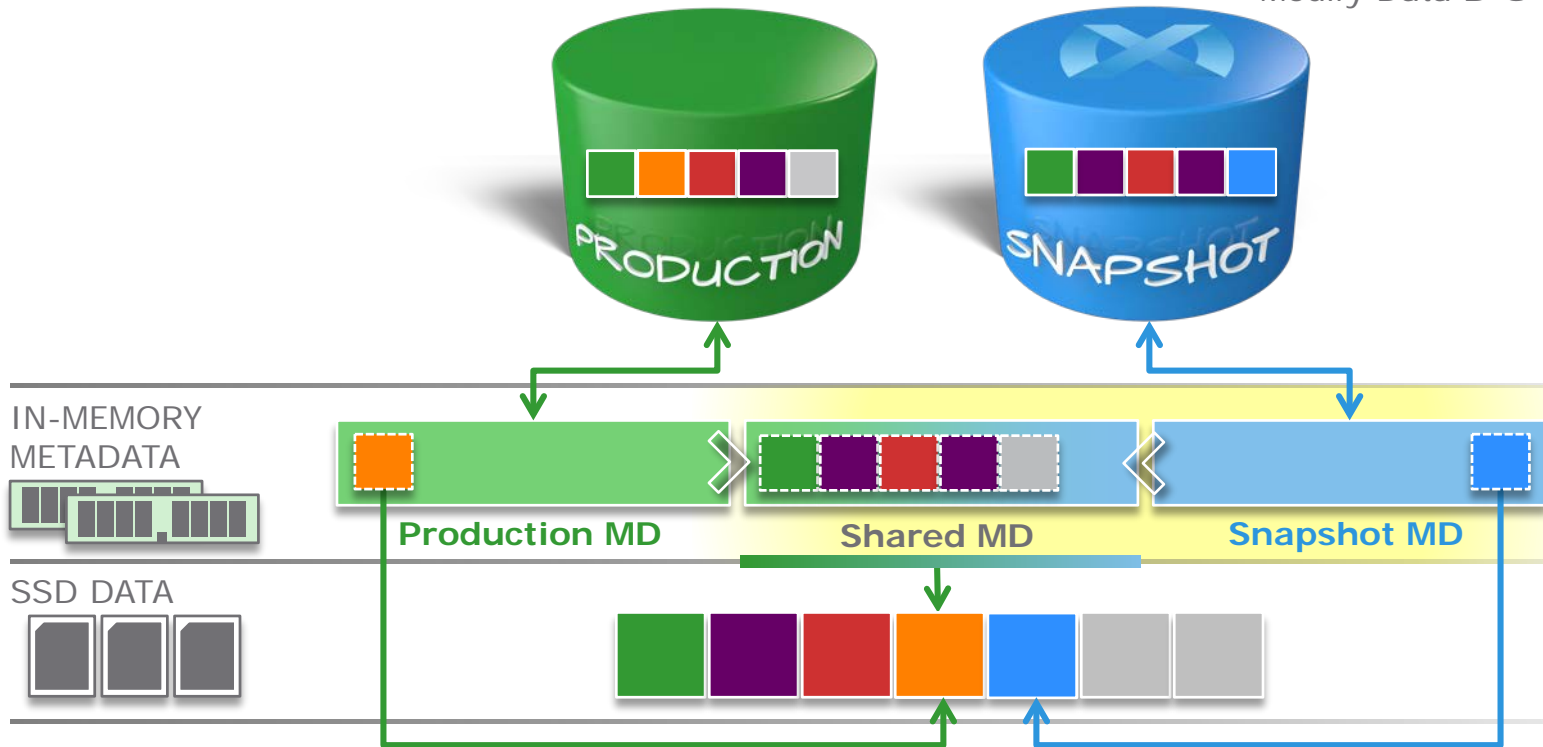

Modify Data **B** @ Block 1

SNAPSHOT PERFORMANCE IS EQUAL

IT'S EXACTLY LIKE WRITING DATA TO THE PRODUCTION VOLUME

Modify Data **D** @ Block 4

XTREMIO COPY SERVICES

100%

PERFORMANCE

(read, write and latency as volume)

SPACE EFFICIENT

(no metadata bloat, no space reservation, no moving blocks)

IN-MEMORY

(instant creation, immediate deletion, flexible topography)

AUTOMATED WORKFLOWS

app-integration with refresh, scheduling, and self-service

BAILLIE GIFFORD: ANALYTICS

ACCELERATE ANALYTIC PROCESS

GOAL

Accelerate business processing time.
System must be ready for a new trading day!
